Supply Chain Resilience

Unprecedented world events, a pandemic, international conflict and the climate crisis have created a 'perfect storm' for supply chain heads being asked to transform the food chain. So how can resilience be built when pressures are already extraordinary and the future demands a net zero existence?

A net zero strategy that tackles food waste urgently

10% food production and consumption is creating lmost a third of all global carbon emissions	60% say food waste has increased over the past six months*	ed Collaboration 40% of businesses are calling on peers to adopt net zero policies to future proof a climate friendly supply chain
i0 – 80% Agriculture is contributing over half of iodiversity loss through destruction of natural habitats		40% of businesses are calling on peers to adopt net zero policies to
19 billion worth of uneaten food is wasted nnually, contributing to the climate crisis	80% said achieving net zero had become their most important priority but,	future proof a climate friendly supply chain
030 We must halve all food waste by the end of the ecade to achieve the UN's Sustainable Development oals	36% say net zero has been deprioritised because of ongoing challenges	34% of UK suppliers support the introduction of mandatory food waste reporting
		Food suppliers understand climate
	and the on the star of	fragility, we're reliant on land for production
		fragility, we're reliant on land for

The

Secret to

Supply Chain

Resilience

SMEs account for **75%** of Sodexo's supply chain

And account for **57%** of its spend

We must support the SME economy with standardised carbon data reporting

Mentoring SMEs and social enterprises will help the whole supply chain achieve net zero

22% said a global carbon pricing and trading agreement should be on the COP27 agenda

38% agree sharing best practice with SMEs to improve supply chain efficiencies will best help address the UK's supply chain challenges

25% are working with suppliers to source more plant-based protein sources rather than meat

38% are increasingly diversifying their supplier base with SMEs

81% said the current crisis has emphasised the need to source more from SMEs

35% are looking to source more food domestically

Action underway

85% said the pandemic has caused long term damage they're yet to recover from

38% continue to be impacted by freight challenges and **44%** labour shortages

32% say their supply chains will not return to optimum efficiency for a full year

8 out of the top 10 countries that the UK sources fruit and vegetables from are **drought-prone**

The problem

Diversification for agility, flexibility and innovation
