QUALITY OF LIFE SERVICES

Maintaining service and life-support systems is an important route to achieving organisational efficiency and business continuity. Working in complex environments and in hostile weather requires reliable plant and equipment. Having a proactive maintenance programme plays a crucial part in ensuring the wellbeing of the offshore workforce through well designed, safe and secure facilities.

A healthy, well maintained environment is a significant factor in achieving improved safety behaviours and increased productivity. Moreover, it has a major effect in a creating a friendly on-site ambiance and in turn, attracting and retaining talent.

Sodexo's asset management system plans, records, monitors, tracks and controls each asset maintenance assignment. This system enables us to schedule planned maintenance with your team or perform that function directly using our discipline trained technicians.

Maintenance is a core competence which reinforces our position as world leader in Quality of Life services.

Sodexo's single point of contact gives client confidence in the responsiveness of its maintenance service
